

Environmental, energy and climate policy

SÜDZUCKER AG and its subsidiaries comprise a group of companies which process agricultural raw materials into foodstuffs and feedstuffs as well as products for energetic and technical applications.

As a matter of policy, SÜDZUCKER is committed to

- reduce resource consumption as well as the environmental and climate impact of its business activities,
- use energy rationally,
- continuously improve the energy efficiency of its production processes and

ensure safe production facilities and working conditions This means to

- comply with all legal and internal requirements,
- continuously review and optimize the energy efficiency and environmental impact of all plant conceptions, production processes and associated supply chains (including purchasing),
- take into account energy efficiency potentials in the design of facilities,
- regularly assess and evaluate risks for plant safety,
- further develop the skills of managers, technical experts and employees,
- ensure that management establishes objectives and actions aimed at continuous improvement,
- systematically measure objectives and evaluate the effectiveness of the defined actions,
- ensure the management provides the necessary resources and information required to execute the actions and to achieve the objectives.

This environmental, energy and climate policy is available to all employees.

It applies to all affiliated companies as well as joint ventures/associated companies of Südzucker Group in accordance with items I. and II. of Südzucker AG's share ownership list pursuant to § 313 (2) of the German Commercial Code (HBG).
